

فهاد الجزء الرابع من site ecommerce ب laravel 7 غادي نكملوا login و logout وغادي نزيدو تعديلات على RegisterController و LoginController باش يمكن نديرو التفعيل ديال الحساب ديال المستخدم.

### 1- تعديل ل RegisterController controller

غادي تمشي ل RegisterController وغادي تزيدي تعديلات لي غادي تكون فاش غادي يتسجل المستخدم فعندنا fonction registered لي الدور ديالها أول مكييسجل المستخدم كنزيدولو كود خاص به باش يفعل الحساب ديالو وكنرسلوه للإيميل ديالو وكن déconnecté لمستخدم باش مييدخل حتى يفعل لحساب ديالو.

الكود ديال ل controller بعد التعديل هو :

```
<?php
```

```
namespace App\Http\Controllers\Auth;
```

```
use App\User;
use Illuminate\Support\Str;
use App\Http\Controllers\Controller;
use App\Mail\ActivateYourAccount;
use Illuminate\Support\Facades\Hash;
use App\Providers\RouteServiceProvider;
use Illuminate\Http\Request;
use Illuminate\Support\Facades\Validator;
use Illuminate\Foundation\Auth\RegistersUsers;
use Illuminate\Support\Facades\Mail;
```

```
class RegisterController extends Controller
```

```
{
    /**
     |-----
     | Register Controller
     |-----
     |
     | This controller handles the registration of new users as well as their
     | validation and creation. By default this controller uses a trait to
     | provide this functionality without requiring any additional code.
     |
     */
}
```

```

use RegistersUsers;

/**
 * Where to redirect users after registration.
 *
 * @var string
 */
protected $redirectTo = "/";

/**
 * Create a new controller instance.
 *
 * @return void
 */
public function __construct()
{
    $this->middleware('guest');
}

/**
 * Get a validator for an incoming registration request.
 *
 * @param array $data
 * @return \Illuminate\Contracts\Validation\Validator
 */
protected function validator(array $data)
{
    return Validator::make($data, [
        'name' => ['required', 'string', 'max:255'],
        'email' => ['required', 'string', 'email', 'max:255',
'unique:users'],
        'password' => ['required', 'string', 'min:8', 'confirmed'],
    ]);
}

/**
 * Create a new user instance after a valid registration.
 *
 * @param array $data
 * @return \App\User
 */
protected function create(array $data)
{
    return User::create([
        'name' => $data['name'],
        'email' => $data['email'],
        'password' => Hash::make($data['password']),
    ]);
}

/**

```

```

* The user has been registered.
*
* @param \Illuminate\Http\Request $request
* @param mixed $user
* @return mixed
*/
protected function registered(Request $request, $user)
{
    //generate user activation code
    $code = Str::random(128);
    //insert code
    $user->code = $code;
    //update user table
    $user->update();
    //logout user
    $this->guard()->logout();
    //send email to activate account
    Mail::to($user)->send(new ActivateYourAccount($code));
    //redirect user
    return redirect("/login")
        ->withInfo("You need to activate your account email sent check
your inbox");
}
}

```

## -2 تعديل ل LoginController controller

غادي تمشي ل LoginController وغادي تزيد تعديلات غادي نزيدو ل fonction authenticated لي الدور ديالها فاش كيبيغي يدخل المستخدم كمتحقق من الحساب ديالو كان مفعول كنخليه يدخل مكانش كنوجهو ل login page باش يطلب رابط التفعيل من جديد.

الكود ديال ل controller بعد التعديل هو :

```

<?php

namespace App\Http\Controllers\Auth;

use Illuminate\Http\Request;
use App\Http\Controllers\Controller;
use Illuminate\Support\Facades\Auth;
use App\Providers\RouteServiceProvider;
use Illuminate\Foundation\Auth\AuthenticatesUsers;

class LoginController extends Controller
{

```

```

/*
|-----|
-- | Login Controller
|-----|
-- |
| This controller handles authenticating users for the application and
| redirecting them to your home screen. The controller uses a trait
| to conveniently provide its functionality to your applications.
|
*/

use AuthenticatesUsers;

/**
 * Where to redirect users after login.
 *
 * @var string
 */
protected $redirectTo = "/";

/**
 * Create a new controller instance.
 *
 * @return void
 */
public function __construct()
{
    $this->middleware('guest')->except('logout');
}

/**
 * The user has been authenticated.
 *
 * @param \Illuminate\Http\Request $request
 * @param mixed $user
 * @return mixed
 */
protected function authenticated(Request $request, $user)
{
    //
    if (!$user->active) {
        Auth::logout();
        return redirect("/login")
            ->with(['errorLink' => 'Activate your account
                <a href="' . route('code.resend', $user->email) . '">
                    Resend activation link
                <a>
            '])->withEmail($user->email);
    }
}

```

```
}  
}
```

### 3- إضافة routes

---

باش هادشي لي زدنا يخدم ضروري ما نزيدو les routes ديال التفعيل ديال الحساب.

غادي تمشي ل dossier routes وغل fichier web.php غادي تزيد les routes لي هما :

```
//activate user account routes  
Route::get('/activate/{code}',  
'ActivationController@activateUserAccount')->name('user.activate');  
Route::get('/resend/{email}',  
'ActivationController@resendActivationCode')->name('code.resend');
```
